ProBatch for the pharmaceutical industry

About:

The Vitux group is backed by Norwegian private capital and is built upon the revolutionary and patented ConCordix technology. Based in Oslo with manufacturing sites in Andenes, Norway, and Windsor, Ontario, Vitux aims to support global health and wellness in collaboration with its partners. Through the development of high-quality nutritional supplements leveraging the ConCordix technology, Vitux offers customers a way to differentiate in their markets and offer distinct advantages to consumers.

Customer:

Vitux

Industry:

Manufacturing

Size:

75+ employees

Country:

Norway

Products & Services:

Dynamics 365 Business Central

Situation:

Vitux had an outdated ERP system that was no longer supported, limiting their ability to control processes throughout the value chain.

Solution:

The company implemented Dynamics 365 Business Central with YaveOn ProBatch, a German ISV solution, for Quality Assurance, LOT Management, and Compliance with regulatory requirements.

Impact:

With this solution, we have better visibility of production and logging of specific processes. We also save time doing the QA/QC processes as these are now more digitalized.

The daily routine in the pharmaceutical industry is influenced by numerous strict regulations, stringent quality requirements and rigorous process monitoring and change control and validation. With Dynamics 365 Business Central and YAVEON ProBatch we have everything in one business system.
