Yaveon 365 **Data Link**

Modern EDI Data Transfer: Internal Mapping & Logic Combined with a State-of-the-Art Transport Platform

The Challenge: Reliable EDI Data Exchange Can Be Challenging

Data must be exchanged between companies in a reliable, secure and traceable manner – regardless of whether they operate in the cloud or on-premises.

- Cloud environments often allow the use of proprietary transfer tools only to a limited extent, or not at all.
 - On-premises solutions, on the other hand, usually involve significant technical effort for operation, certificates, updates, and monitoring.
 - Different protocols and requirements from partners increase complexity and, as a result, the potential for errors and the support effort required.
- Exchanging data securely and automatically across different systems is [difficult to plan and time-consuming](#).

The Solution: Yaveon 365 Data Link

Yaveon 365 Data Link is the modern and secure solution for EDI data exchange.

- [Seamlessly integrated into Microsoft Business Central](#): Mapping, conversion and logic remain as usual directly within your Business Central environment.
- [Professional, protocol-compliant transmission](#): Transmission is carried out via the established EDI transport service Seeburger.
- [Cloud & On-Premises](#): No local installation or additional operation of your own transfer tools required. Yaveon 365 Data Link is also suitable for on-premises systems.
- [Supports all common standards](#): e.g. AS2, OFTP2, SFTP, X400 and more.
- [Regular updates & modern infrastructure](#): Automatic and without any additional effort on your part.

Your Greatest Advantages

Speed

Fast, reliable transmission, ideal for onboarding new partners and managing increasing volumes.

Simplicity

A central transmission system for all channels reduces complexity, resulting in fewer dependencies and errors.

Security

High protocol and security standards thanks to a professional infrastructure with Seeburger.

Convenience

Operation, communication, as well as certificate and protocol management are fully taken care of.

Cost Savings

No need for your own communication software, no local installation, no infrastructure costs.

Future-proof

Compliant with modern cloud requirements and prepared for new demands and data volumes.

Full Integration

Mapping and logic remain fully within Microsoft Business Central.

Flexibility

Supports established protocols tailored to your partner landscape.

More Time

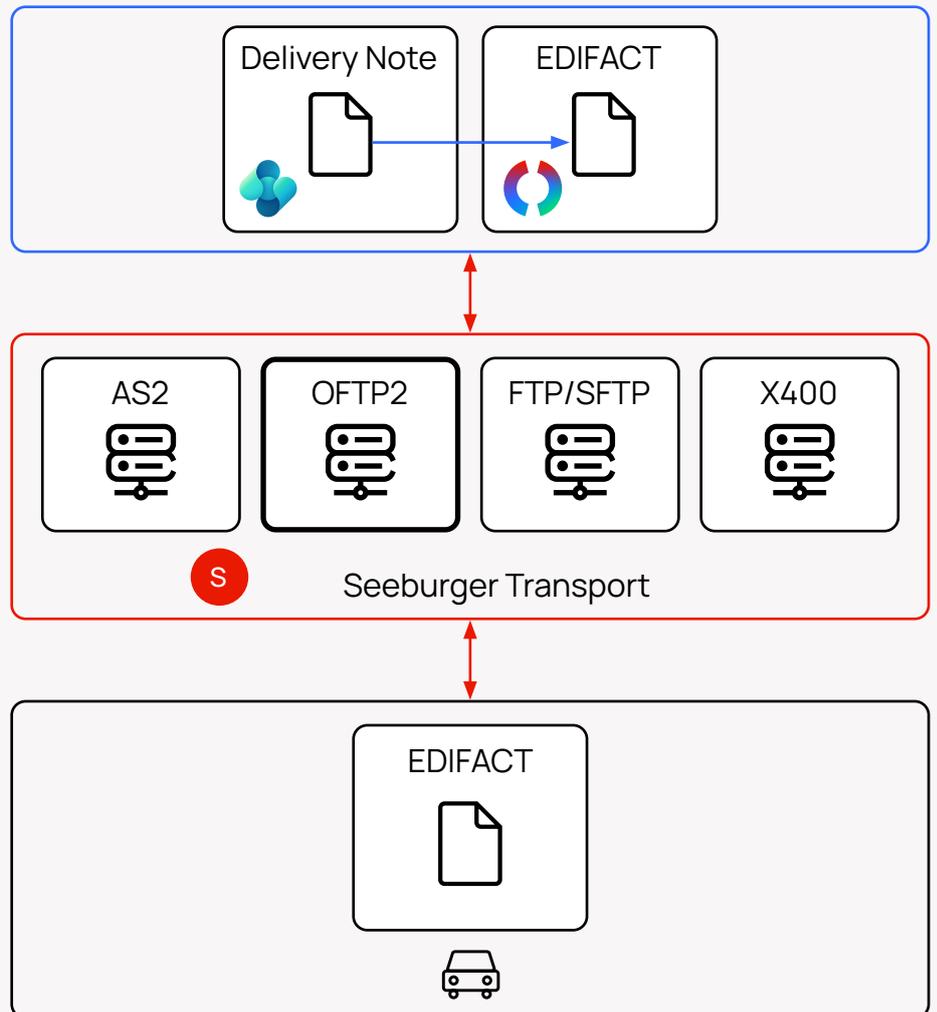

Automated processes relieve IT and specialist departments.

Which Yaveon Apps Use Data Link?

Yaveon 365 Data Link simplifies data exchange and complements Yaveon 365 EDI, Automotive, and 3PL - shown here using the automotive industry as an example.

Exemplary Representation of the Process

A supplier creates, for example, a delivery note in Microsoft Dynamics 365 Business Central. Yaveon 365 automatically converts this into the EDIFACT format required by the manufacturer and transfers the message to the Seeburger platform, which sends it securely, reliably, and via the appropriate protocol to the manufacturer.

Price

The price for Yaveon 365 Data Link depends on the number of connected partners as well as the number of clients set up. The calculation is very simple:

- Monthly license fees:
 - 100 € per client
 - 20 € per partner
- One-time setup fees:
 - 2 hours per partner
