Product

- Product: ERP & BI
- Basis: Microsoft Dynamics 365 Business Central (Available from Microsoft Dynamics NAV 2013)
- Company size: Suitable for any company size
- Industries: All

The 4 Key Benefits:

- Fast and flexible: Quickly retrieve data from BC for your application or task without spending time on additional programming.
- Speed: Even with large amounts of data, you can import and export your data swiftly.
- Intuitive operation: BI Connect is easy to use and intuitive for users to operate.

Why Yaveon BI Connect is the **perfect solution** for you

You want access to Microsoft Dynamics 365 Business Central data visualizations that enable easy and intuitive analysis. So, you may be asking yourself: How can we reliably connect a BI tool or a data warehouse (DWH) to your Microsoft Dynamics 365 Business Central system, without additional work, or tedious programming? We have the answer—with our Yaveon BI Connect app. Your benefits? You can simply export the data you need quickly, directly, and without code from Business Central or Navision. At any time, you can also add additional tables, fields or app data, making it easy to add new requirements. The authorizations stored in BC are taken into account so that a user can only export the data for which they are authorized.

Export Any Tables From Business Central or Navision

With Yaveon BI Connect, we offer a comprehensive data integration solution. It allows you to export any tables from Business Central or Navision once the connector has been set up. In addition, any type of installation is possible – whether cloud or local.

Data Export From New Fields or Apps

If you integrate new fields or a new app in BC and you'd like to export this data, the connector enables this, without any problems or any coding needed. In this case, simply extend the data query in the BI configuration. This allows you to access new fields or even new tables in no time at all – quickly, easily, and flexibly.

Simple, Intuitive Operation

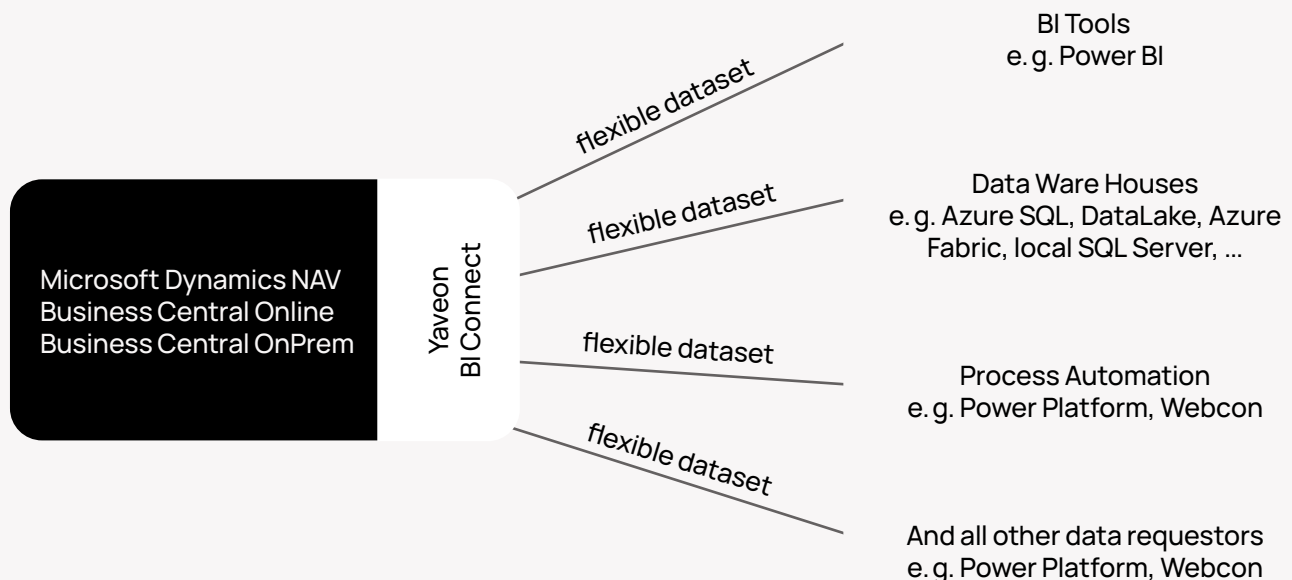

You don't need to be a data specialist to use our connector. It works completely without coding, making it intuitive for users to operate. Whether you need the sales orders of a specific customer, the master data of the creditors or selected article items – with the help of BI Connect, you can design any query individually according to your own requirements.

BI Connect: Universal Usage

Another advantage is that our BI Connect can be used universally for your BI system – for example, for data analysis in Power BI, or as a continuous connection to your data warehouse system. Thanks to the high performance of the connector, you can easily connect even large volumes of data to your DWH environment at your desired update intervals. With BI Connect, you can react quickly, efficiently, and flexibly to business requirements, for successful data integration in your company.

The Advantages at a Glance

- One-time installation of the app in BC
- Individual selection of required tables and fields
- Applies BC authorizations when accessing tables
- No wasting time
- No additional workload or expenditure for the object development in NAV/BC
- Fast performance, even with large amounts of data
- Support of all apps/add-ons without customization and dependencies
- Use for all installation variants (Cloud/Cloud, Cloud/OnPrem, OnPrem/OnPrem)
- Update-ready with standardization
- Easy data export from Business Central
- Provides the connection via modern web services with a high level of security
- High reaction speed for your company
