Everything at a Glance.

Product

- Product: ESCM
- Basis: Microsoft Dynamics 365 Business Central
- Company size: Small and medium-sized companies
- Industries: For all industries

The Four Most Important Advantages:

- Automatisierung: Use an automatic process that manages everything for you in the background: from change control and automatic import and export through to the processing and logging errors.
- Versatile: Whether you are working with another Microsoft Dynamics 365 Business Central environment, SAP, CRM, or any other subsystem - for example, shipping systems, web store, label software, or customs software: You can directly integrate the solution.
- Data protection: Specify whether your data should be additionally protected down to the field level. This feature ensures that the user does not inadvertently overwrite fields that are populated by another system.
- Flexibility: Integrate additional tables and data fields in your communication without doing any coding - even from different apps. Innovative mapping technology enables the effortless configuration of even complex mapping logics.

How Does This Work Exactly?

The Features.

Page 01/03

Centralized Data Maintenance

Master data such as items, customers, and vendors and dependent data such as translations, item units, or delivery addresses can be maintained in just one place. Automatically distribute the data to locations, sales subsidiaries, production sites, subsidiaries, and external service providers or even other ERP systems such as SAP. Selected core fields also enable the capture of country and company-specific additional data.

Data Protection

Special field authorizations enable the differentiation between central and local fields and the provision of specified permissions.

Synchronization

You don't have to do a thing because your data is automatically monitored even across multiple levels and synchronized across database boundaries.

Extendable

Include your own fields and tables, even from other add-on modules and industry solutions - without any coding necessary. The mapping technology enables you to overcome even difficult challenges on the configuration level, such as the document transition from purchase to sales or a change of language.

Document Exchange

Yaveon 365 Intercompany or EDI also work together perfectly to automate document exchange, for example, purchase orders, sales orders, deliveries, and invoices.
